

DocuStreamTM
Your SAP Integrated ECM Solution

A Partner Solution for ECM

Business Challenge

Many companies have successfully established an SAP backbone and strive to realize complete operational business efficiency. Corporate environments remain overwrought with paper documents, email, faxes and other printed documents. Each is circulated throughout the organization and ultimately filed. Document-centric process are often scattered and disorganized, and bottlenecks slow the overall process.

Streamlined Business processes through System integration are key to effective business management and establish the following advantages;

- **Utilize Document management systems that provide efficient workflow for process management.**
- **Establish integrated ERP/ECM systems that automate and track processes activities.**
- **Implement Paperless processes that are efficient, easy to track, and accurate.**
- **Provide Managers the ability to access specific status reports and process performance statistics.**
- **Create Meta-Data exchange and synchronization between systems**

Our Solution

DocuStream

DocuStream is a suite of components that allow for dynamic integration between SAP and FileNET's Enterprise Content Management Solution (ECM). By increasing throughput via seamless automation of your document management needs, DocuStream cross-industry, provides high business value within the ERP/ECM integration market, utilizing best-of-breed technologies and business practices. DocuStream optimizes processing of transactions by utilizing the best procedures, integrating related information, and maximizing existing SAP R/3 (ERP).

DocuStream Base

DocuStream Product Suite exists of is Base Solution and various specific Business process oriented Extensions. The DocuStream Base Solution provides client with the necessary functionality to establish flexible and high performance communication process execution between SAP R/3 and FileNet. This is being realized by two components, the DocuStream Enterprise Connector that is integrating with FileNet and the DocuStream Gateway that is interacting with SAP R/3. The communication and information exchange process is fully Java enabled and makes utilization of the standard available SAP Java Connector (Jco).

Furthermore, the DocuStream Base solution provides clients with added functionality to seamlessly integrate ECM Business processes between FileNet and SAP. These functions are following:

SoftLink: Want to add 1 or more electronic images or soft copies to an existing SAP object such as an Invoice, Vendor Master, or Human Resource record? With **one** click of the mouse from within your SAP GUI, DocuStream's SoftLink stores the images to your FileNet repository and **automatically links it** to the specified SAP transaction.

QuickLink: Does your document/content already exist in FileNet, but still needs to be linked to SAP? With QuickLink, search for and attach your existing FileNet images with just a few clicks, all from your SAP session.

StorageLink: Frustrated with the inability to view your SAP reports/print list only from within your SAP Gui? SAP's proprietary format (.alf) is no longer a constraint when storing your SAP print lists in FileNet. With DocuStream™ StorageLink, **store your SAP print lists in FileNet in HTML or PDF** format *with* additional, dynamically configurable indices. Your SAP print list can now be viewed via all mediums, whether that be from standard SAP, directly from FileNet, or from your web or thin client application portal!

ImageTrack: Are viewing history and image security a priority? With DocuStream's new ImageTrack component, **viewing of images can be tracked and logged** for future reference and review.

LinkMaintenance: With the DocuStream LinkMaintenance Workbench, Administrators can have **full maintenance over all SAP link entries** from their SAP session. Take the headache out of those situations where manual link entry creation or modification is required.

EasyLink: Have an existing SAP object that you need to attach a hard copy to? EasyLink takes committed images from FileNet and **automatically links** them to the corresponding SAP record. No user interaction. No manual creation of link entries.

CheckLink: Are your SAP and Image repository systems in-synch? Do all your relevant SAP documents *have* linked documents that are supposed to? Orphan images exist in your FileNet repository? Utilize DocuStream's CheckLink functionality to ensure that your SAP and FileNet system image link are in-synch and in-check... **don't let your ECM solution become a management nightmare.**

Benefits

- ✓ **Improved Productivity**
- ✓ **Increased integration through Service for Object**
- ✓ **Meta-Data Exchange**
- ✓ **Reduced Process Errors**
- ✓ **View Audit History Trails**
- ✓ **Reduce or Eliminate Fines**
- ✓ **Increase Control and Visibility**
- ✓ **Performance Metrics and Monitoring**
- ✓ **Eliminate Lost or Misfiled Documents**

The Company

Cornucopia Solutions, Inc.

Cornucopia Solution Inc. (CSI) based in Dallas, Texas, with a subsidiary in Calgary, Canada, is an innovative provider of Business Processes integration between SAP Systems and Enterprise Content Management Solutions.
